

To the Yukon Legislative Assembly:
This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's at *Species Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and whose populations are proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate was conducted in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bear numbers;

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and their populations' have been proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

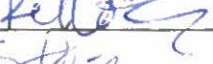

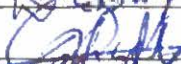

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and their populations' have been proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

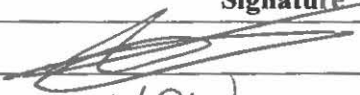

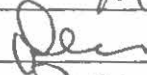

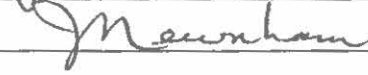

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and their populations' have been proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

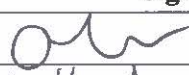

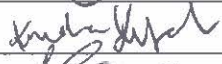

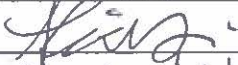

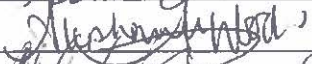

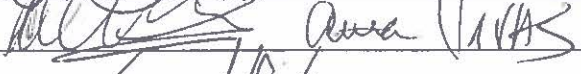

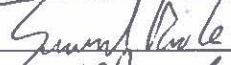

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and their populations' have been proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

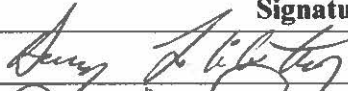

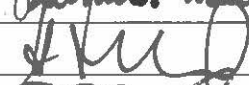

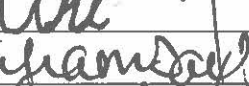

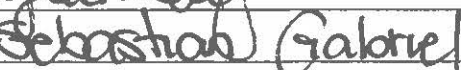

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of North American mammals, and are proven to decline from human activity;

THAT increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting, and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

THAT the current 2019 management plan is not based on Western science or on Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and help to regulate prey species, and protecting them is protecting Yukon's biodiversity;

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, and that many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness; and

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT grizzly bears are designated as a species of special concern under the Government of Canada's *Species at Risk Act*, and are extirpated in much of Canada, while in Yukon close to 2000 bear-hunting tags are issued annually and grizzlies are regularly hunted for trophies;

THAT grizzly bears require very large areas of undivided and undisturbed habitat, are the slowest to reproduce of all North American mammals, and their populations' have been proven to decline from the impacts of human activity;

THAT Increasing threats to grizzly bears' survival include fragmentation of habitat due to roads, increased industrial activity, hunting and the disturbed hibernation and food availability patterns and other difficulties caused by the heating climate;

THAT there has been no Yukon grizzly bear count since an estimate done in the 1990s, and given the age of the estimate and the increasing threats to grizzly survival since then, the precautionary principle must prevail at least until there is reliable knowledge of grizzly bears' numbers;

THAT the current 2019 management plan is not based on Western science or Indigenous knowledge;

THAT grizzlies are a keystone species, ecosystem engineers that disperse seeds, till the land, fertilize forests, and regulate prey species, and protecting them is protecting Yukon's biodiversity; and

THAT First Nations have revered grizzly bears and considered them sacred for thousands of years, many Yukoners of all backgrounds consider grizzly bears integral to the value of wilderness, and grizzlies have an inherent right not to be killed just to be displayed on someone's wall;

THEREFORE, the undersigned ask the Yukon Legislative Assembly to urge the Government of Yukon to:

1. ban all trophy hunting of grizzly bears in Yukon; and
2. ban roadside hunting of grizzly bears throughout Yukon.
