

To the Yukon Legislative Assembly:

This petition of the undersigned shows:

THAT diesel generators are being used to create electricity in Faro, Mayo, Dawson City, and Whitehorse in residential areas without noise emission standards;

THAT many Yukoners are negatively impacted by the noise from diesel generators because they disturb the right to the quiet enjoyment of Yukoners' homes, yards, and public green spaces;

THAT British Columbia and Alberta regulate industrial noise emissions for oil and gas power, but not the Yukon;

THAT 30 more megawatts of fossil fuel energy are being produced in Whitehorse than in 2024 and the diesel generators run significantly more, up to 24 hours a day, seven days a week for months at a time;

THAT an additional 40 megawatts are projected for non-industrial demand in the next five years; and

THAT less energy is being generated from renewable resources in the Yukon now than in 2024;

THEREFORE the undersigned ask the Yukon Legislative Assembly to:

- (1) regulate noise emissions from new and existing power facilities in residential areas with regulations that cap sound levels for both frequency and volume; and
- (2) urge the Yukon Energy Corporation, as per Air Emissions Permit NO. 60-010-04, to design and install effective noise mitigation on all existing diesel generators and any new generators without further delay.
